

## **NEW DRUG STUDY FOR PATIENTS WITH HYPERAMMONEMIA**

Researchers at Children's National Medical Center are looking for children and adults to participate in a NEW drug study for hyperammonemia.

If you, your child, or someone you know has a diagnosis of carbamyl phosphate synthetase I (CPSI) deficiency, N-acetylglutamate (NAGS) deficiency, Propionic Acidemia (PA), or Methylmalonic Acidemia (MMA) you or they may be eligible for this study. Eligible patients must be:

- 1 to 70 years of age
- Have a diagnosis of one of the following conditions: CPSI deficiency, NAGS deficiency, PA, or MMA
- Be willing to travel to Washington D.C. for a 4 day study (travel and lodging paid by Children's National Medical Center)

Your participation may help provide an additional treatment option for people with these conditions who suffer from elevated blood ammonia levels.
